

DPM MRS For Glock 17-22-31-37 / GENS 1 to 3

The DPM Recoil Reduction Rod Standard Version is designed to serve 115gr & 124gr ammo, also it is compatible for the above type C models too.

National Tactical Officers Association Tested & Recommended.

This DPM Mechanical Recoil Reduction System works due to the multi spring intricate rod (3 springs) and controls the functionality of the gun.

The third spring which is contained within the rod controls the movement of the slide so it never rams on the frame.

Also included with the system are **2** separate springs so the user can fine-tune the weapon for his/hers personal standards.

The longer spring (more coils) is stronger and has a heavier pound rating than the shorter spring.

Power Rates

Slide on the battery (idle position)

Short Spring: 3,75kg / 8.26 lbs

Long Spring: 4,1kg / 9.0 lbs

Slide full open position

Total: 11,8Kg / 26 lbs (approx.)

Overall Advantages

Faster follow up shots

Improved firing speed

Slide and Frame Protection

Elimination of jams

Significant recoil reduction

Better double-tap concentration

Better control and greater accuracy

Millions of our patented products are in service to military, law enforcement and sports pistols around the world.
