

## Machine Gun M86

Machine gun M86 is intended for mounting on tanks and combat vehicles, as a gun fixed to turret.

Firing without direct contact with machine gun is achieved through electric trigger.

Mechanical triggering is enabled through the lever on electric trigger.

It is a gas operated weapon, with rotating bolt as locking system.

The barrel is made by cold forging, the interior is chrome plated, which guarantees its long service life and steady ballistic characteristics.

In heavy duty, for cooling purposes, the barrel is easily disassembled and replaced with the spare one.

Gas flow regulator provides reliable functioning in all environments.

Flash hider placed on the muzzle disperses gun powder gas and reduces the flash, thus masking the position of the weapon.

Due to its primary purpose, the machine gun does not have iron sights.

The light machine gun is fed from the belt placed in ammunition box, with the capacity of 250 cartridges.

### Complete set:
