Packing case

Machine gun M87 - naval version is formed by mounting of machine gun M87 to rotating base that is placed on a bell shaped mount.

It is mounted on a vessel or vehicle by connecting the mount to the foundation with bolts.

Quick and easy change of height is achieved with elevation system placed in rotating base.

Machine Gun M87 NAVAL (12.7x108mm /.50 Browning)

The design of the machine gun provides reliable function, without stoppages, in all environments. It is a gas operated weapon, with sliding block breech as the locking system.

Barrel is cold forged, with chrome plated interior, which provides long service life with unchanged ballistic characteristics.

The barrel is disassembled from the machine gun quickly and easily, so in heavy duty it is possible to cool it quickly or replace it with the spare one.

Machine gun is fed from a belt, placed in the ammunition box with the capacity of 60 rounds.

After firing, cartridge cases are ejected forward, which increases the safety of the shooter and the crew around him.

Flash hider on the muzzle disperses gun powder gas and reduces the flash, which masks the position of the weapon.

Origin: Republic of Serbia
