

RPG-7 MX2 40mm

PG-7 MX2 is a multipurpose, lightweight infantry weapon system characterized by its ease of use, portability, durability and low life cycle cost, making it one of the most widely used rocket launchers in the world.

A true multipurpose character of RPG-7 MX2 is illustrated with a wide range of available ammunition - HEAT with singular or tandem warheads against tanks and armored vehicles, fragmentation rounds with point detonating fuse against exposed infantry and soft skinned vehicles as well as thermobaric rocket effective against fortifications, unarmored weapon systems and entrenched infantry.

RPG-7MX2 is entirely produced using milling rather than casting process.

Proprietary manufacturing technology, as well as steel heat treatment and coating process ensure a high quality product designed to withstand more than 1000 live fire cycles, thus decreasing life cycle cost relative to other similar products. Stringent quality assurance procedures, rigorous testing process and minimal tolerances insures product consistency, interchangeability of spare parts and total customer satisfaction.

Maximum effective range against stationary area targets is 800+ meters, dependent on rocket types and sighting unit, while moving targets can be engaged effectively at ranges of up to 400 meters.

Our product is backwards compatible with all currently available ammunition for RPG-7 platform.

User proficiency is achieved through the use of sub-caliber training rocket using standard 7.62x39 ammunition, making live fire drills extremely cheap, simple and realistic.

RPG-7 MX2 40mm

Our enhanced optical sighting unit is compatible with the following ammunition types: PG7V series, OG7V, TGB7V as well as GSh7VT.

Illuminated dial-in reticle significantly increases first round hit probability over the original optical sighting unit, both in day and night/low light conditions.

LED illumination ensures long battery life and simplifies maintenance of the optical sighting unit. Sight magnification is 2,3x, with FOV of 13°.

Origin: **Bosnia & Herzegovina**

Weight of the launcher 6,83 kg
Length of launcher: 950 mm
Mine weight: 2,25 kg
The weight of the warhead: 1kg
Weight of powder charge: 0,4 kg
length of grenade with powder charge: 925 mm

RPG-7 MX2 40mm

RPG-7MX2 is packaged in a wooden container with three weapon systems, three optical sight systems as well as three sets of accessories and toolkits.

The box is painted in olive drab or per specific request.

The complete wooden container also meets the prescribed military standards.

TOOL KIT INCLUDES

- Small pin punch
- Wrench
- Universal Wrench
- Shock pin spring
- Shock pin
- Tool kit bag
- Pin punch
- Cleaner
- Grenade pouch
- Optics pouch
- Firing Mechanism mounting
- Dismounting tool
