

Spitting Cobra

Defense Shields

10

Years light
transmission
warranty

5

Years
bulletproof
warranty

TRANSPARENT RIOT SHIELD

- Double electro-shock system
- OC Pepper spitting system
- Changeable OC Pepper can
- Alarm/siren
- LED light "laser" pointer,
- Electro-shock safety pin
- 10 year light transmission warranty
- Impact, chemical, fire resistant
- Economically designed arm support
- Instant abandonment system

BULLETPROOF SHIELD

- NIJ IIIA protection level
- NIJ IIIA bulletproof window
- Electroshock system
- OC Pepper spitting system,
- Changeable OC Pepper can
- LED light "laser" pointer
- Electro-shock safety pin
- 5 year bulletproof warranty
- Impact, chemical, fire resistant
- Economically designed, arm support
- Instant abandonment system

TRANSPARENT RIOT SHIELD

ELECTROSHOCK SYSTEM

Voltage: 150.000V
Electric current 1.7 A
Re-supply (rechargeable)
Duration: 35 minutes of continuous operation
Recharge time: 45 minutes of loading

LED LIGHT POINTER (laser pointer Imitation)

Supply 3 standard LR44 batteries
Wavelength: 650nm
Range: > 400m
Color: red

PITTING SYSTEM

Range: up to 8 in
Replaceable canister

The Multifunction Shield Spitting Cobra is an innovation in the global market and represents a step forward in the development of a shield to defend against flying objects and strokes, the most functional in terms of modern equipment for police officers, soldiers or security guards.

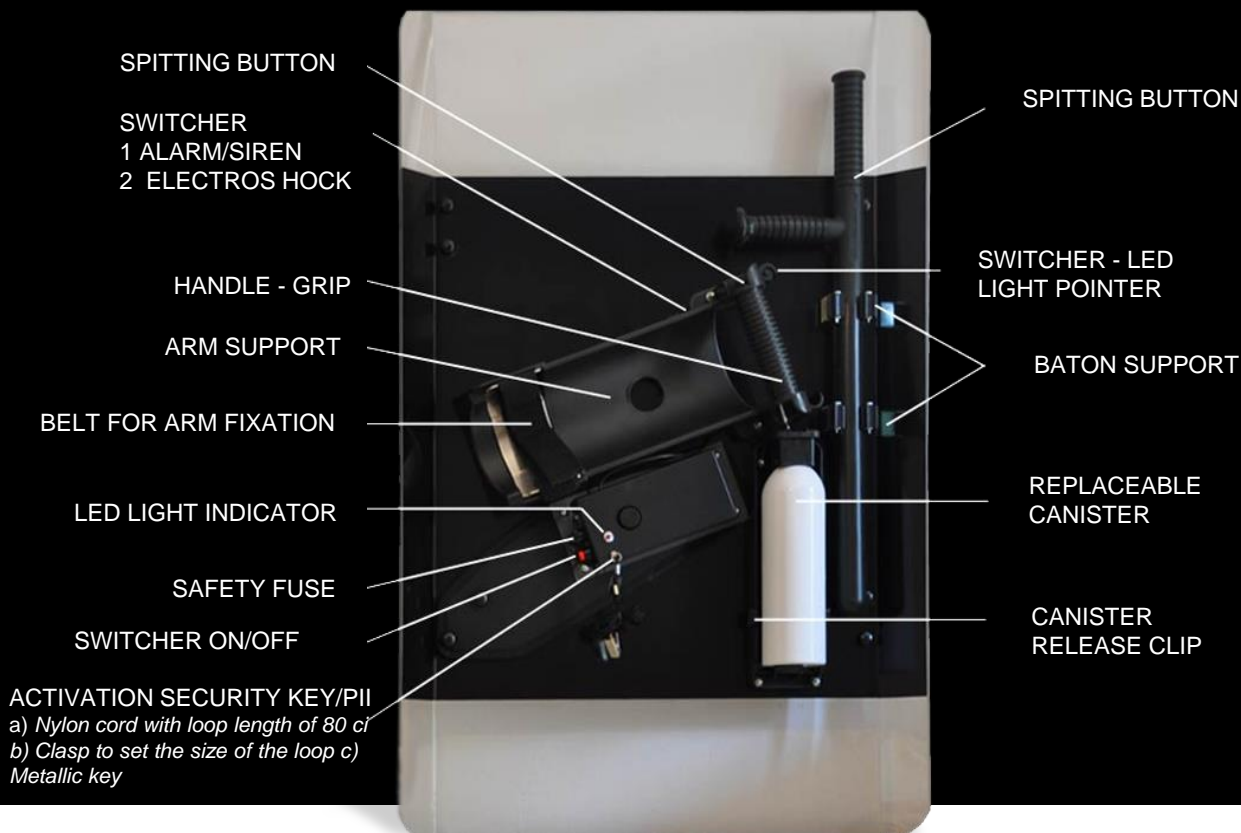

The Multifunction Spitting Cobra Shield increases the safety of operational staff (Operating Officer), its efficiency and offers new opportunities in tactics in controlling the riot control.

The shield is a non-lethal anti riot system, which with its appearance and psychological effects (led light pointer, alarm/siren, spark and electroshock sound effect) affects the opposite side, which greatly helps to avoid physical contact between the opposing sides.

Security key (pin) in case of alienation of the shield activates an alarm sound and prevents the use of electroshock device.

The canister itself is no longer useful and should be activated only with a Shield Spitting Cobra.

Transparent shield plate was selected from the leading manufacturer of polycarbonate LEXAN® brand, which has been tested in restoring order at mass gatherings and for interventions in the riots.

Polycarbonate shield bears great features: durability against shocks, high chemical resistance, heat resistance, UV ... The shield is UV protected and offers 10-year warranty against loss of light transmission.

Cleaning - For small areas wash sheet with a solution of mild soap and lukewarm water, using a soft cloth or sponge. For larger areas clean surface with a high pressure water and/or steam cleaner. Do not use abrasive cleaners or detergents or sharp instruments which may scratch.

You can choose from simple polycarbonate - transparent shields (plate + handle) to the fully equipped in optional sizes.

All shields have folded edges, which increases user safety and increases the compactness of shield horizontally and vertically.

Research shows that the plate thickness of 4 mm is best compromise of lightweight, compactness and impact resistance.

With the 2011 model we were able to extend the effect of electro-shock from the bottom to the top of the shield, but the customer has both options available.

On customer request we can print the words, as "police" in any font and font size.

Cobra Spitting Shield

LED LIGHT POINTER
(laser pointer Imitation)
- Supply 3 standard LR44 batteries
- Wavelength: 650nm
- Range: > 400m
- Color: red

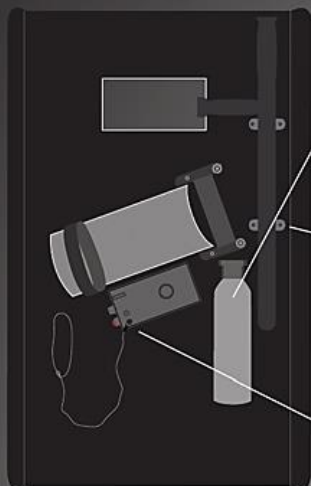

ELECTROSHOCK SYSTEM
- Voltage: 150.000V
- Electric current 1.7 A
- Re-supply (rechargeable)
- Duration: 35 minutes of continuous operation
- Recharge time: 45 minutes of loading

SPRAYING SYSTEM
Quantity: 500 ml
Range: up to 8 m
Replaceable tin

HOLDER FOR BATON (TONFA)
- Diameter flexible
(from 20 to 35 mm)
- Stainless steel

ACTIVATION - SECURITY KEY / PIN
- Nylon cord with loop length of 80 cm
- Clasp to set the size of the loop
- Metallic key

ALARM / SIREN
Sound level: 110 dB
Power: rechargeable battery
Duration: > 7 hours

The Multifunction Shield Spitting Cobra is an innovation in the global market and represents a step forward in the development of a shield to defend against flying objects and strokes, the most functional in terms of modern equipment for police officers, soldiers or security guards.

The bulletproof shield has been designed taking into consideration the best ratio of the minimum weight and requested bulletproof protection level. As usual in bulletproof shields, has been decided to establish a NIJ IIIA protection level of the shield and for innovative bulletproof window as well. The panel is made of aramid fibers and the window of polycarbonate and acrylic layers. The window is the result of self-development, tested in many situations and is distinguished by its low weight. The edge of the shield is protected with a rubber border with a steel core and protects the shield against damage caused by the strokes and the water.

The Multifunction Spitting Cobra Shield increases the safety of operational staff (Operating Officer), its efficiency and offers new opportunities in tactics in controlling the riot control.

The shield is a non-leathal anti riot system, which with its appearance and psychological effects (led light pointer, alarm/siren, spark and electroshock sound effect) affects the opposite side, which greatly helps to avoid physical contact between the opposing sides.

Security key (pin) in case of alienation of the shield activates an alarm sound and prevents the use of electroshock device. The canister itself is no longer useful and should be activated only with a Shield Spitting Cobra.

This bulletproof shield is also available in all configurations from the simplest to those with multiple functions. They come in two forms, ie as a flat panel or with curved sides with bulletproof window or without. The size of the shield is standard 600 x 900 mm, but at the request of the user, the dimension may be adjusted.

You can choose from simple polycarbonate - transparent shields (plate + handle) to the fully equipped in optional sizes.

All shields have folded edges, which increases user safety and increases the compactness of shield horizontally and vertically.

Research shows that the plate thickness of 4 mm is best compromise of lightweight, compactness and impact resistance.
