

CARBINE/SUB-MACHINE GUN

VSK-100

In terms of its performance characteristics, the carbine/sub-machine gun VSK-100 significantly exceeds such widely known original models as AK-47 and AKM.

In particular, the carbine/sub-machine gun has significantly improved accuracy (when shooting in short bursts) and density of fire.

Picatinny rail allows installing collimator, optical and optoelectronic sights of Belarusian and foreign manufacturers on the carbine/sub-machine gun VSK-100.

Box-type
30 rounds

Drum-type
75-95 rounds

Magazines used

The carbine/sub-machine gun VSK-100 can be produced either with a right or with a left bolt.*
